1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 27 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claim recites a "program product ..." for performing a mathematical function.

"[t]o satisfy section 101 requirements, the claim must be for a practical application of the Sec. 101 judicial exception, which can be identified in various ways:

- . The claimed invention "transforms" an article or physical object to a different state or thing.
- . The claimed invention otherwise produces a useful, concrete and tangible result,...".

See "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" OG Date: 22 November 2005.

In order for claims to be statutory, claims must include a practical application with a concrete, useful, and tangible result. However, claim 27 merely discloses steps of performing mathematical function **without disclosing a practical application with a concrete, useful, and tangible result, as they are pre-emptive in any application.** Therefore, claim 27 is directed to non-statutory subject matter.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umeno EP 1 289 186 A2 (Applicant's admission Prior Art) in view of Fengchai, "Improve

on Dynamic Pseudo-random Sequence Encrypting Method and Application Thereof”  
(Applicant’s admission Prior Art).

Umeno discloses, e.g., see Fig. 1, the invention substantially as claimed, including: key accepting unit (103), generating unit (102), repetition controller (104), data accepting unit (105), and converting unit (106). It is noted that Umeno does not specifically detail the claimed “rotation section” feature; however, the feature is old and well known in the art. For example, Fengchai discloses in “Improve on Dynamic Pseudo-random Sequence Encrypting Method and Application Thereof” a “circularly left-shifted by n bits” feature. Therefore, the feature is considered equivalent function with the claimed “rotation section” feature. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine “circularly left-shifted by n bits” in Umeno, thereby making the claimed invention, because the proposed device is random sequence generating apparatus having “rotation section” feature as claimed.

4. Due to the NEW grounds of rejection(s), the Office Action is made NON-FINAL.
